

# REGISTER AS A BONE MARROW DONOR

If You Could **Save a Life**, Would You?

**Saturday, April 27, 2013**

**10:00 AM – 4:00 PM**

**Jackson Liberty High School**

To Myra, his wife of 34 years, David is the love of her life.

To his son, Brien, and daughter-in-law, Maureen, he is a constant inspiration and source of strength and love.

To his two grandchildren, Patrick and Sarah, he is the best “Pop-Pop” anyone could wish for; attending (and cheering loudly) at everyone of Patrick’s basketball and soccer games and holding Sarah’s hand every step of the way in her life-long struggle with Rett Syndrome.

To his coworkers in the Department of Military and Veteran Affairs David is an endless advocate for the rights and needs of our veterans.

David’s life as a loving parent, adoring grandparent, devoted husband, and dedicated public servant came to a complete standstill this year: he was diagnosed with Acute Myeloid Leukemia (AML) and now needs a bone marrow transplant to survive. Currently there are no matching donors on the national registry, which is why the community of Jackson is holding a donor drive in David’s honor. David is the type of man to give help, not ask for it, so his friends, family, and the countless people whose lives he’s changed are asking: **Would you help to save his life?**

# FACTS ABOUT BONE MARROW DONATION

## WHAT IS DELETE BLOOD CANCER?

Delete Blood Cancer DKMS is the world's largest bone marrow donor center. We lead the fight to defeat blood cancer by empowering people to take action, give bone marrow and save lives.

## HOW CAN I MAKE A DIFFERENCE?

You can register to become a bone marrow donor and increase the chance that a patient can find a match and receive a life-saving transplant. The donor and patient should share at least 8 HLA tissue characteristics, but ideally having 10 in common would be a good match. With more than 7,000 known HLA types that occur in millions of combinations, finding a match is like winning the lottery. Every new donor raises the odds.

## WHO CAN BECOME A BONE MARROW DONOR?

You must be 18-55 years old, in good general health, weight at least 110 pounds, have a maximum body mass index of 40, and be willing to donate to any patient in need. If you meet these requirements, you can sign up by completing a registration form and swabbing the inside of your cheeks to collect cells for HLA tissue typing.

## WHAT IS MY COMMITMENT?

Registering is the first step toward saving a life. Once your HLA information appears anonymously on national registry, you must be willing to donate to anyone in need. You might be a match for someone at any point after registering, so it's important that you keep your contact and health information updated at [deletebloodcancer.org](http://deletebloodcancer.org). Your information will stay on the registry until you are 61 or ask to have it removed.

## WHAT HAPPENS IF I'M A MATCH?

If you are a match for a patient, someone from Delete Blood Cancer will contact you with the great news. At that time, we ask you to complete a health questionnaire. We will arrange for you to provide a blood sample and possibly undergo additional testing to determine if you are the best possible donor for the patient. If we've determined that you are, you will be asked to donate in one of two ways selected by the patient's doctor. You must be willing to donate using either method. There are no costs to you at any point.

## TWO WAYS TO DONATE

### PERIPHERAL BLOOD STEM CELL DONATION:

Cells are collected via blood stream during an outpatient procedure. Blood is drawn from one arm into a machine that filters out the stem cells for the patient and then returns the remaining blood through the other arm. This procedure takes about 4-8 hours over the course of 1-2 consecutive days. On the four days before and on the day of the procedure, you will receive a daily injection of filgrastim, a synthetic protein that boosts your stem cell production. While taking filgrastim, many donors experience flu-like symptoms such as headaches, bone and muscle aches and fatigue. Most side-effects subside within 48 hours of donating.

### BONE MARROW DONATION:

Marrow cells are collected from the backside of the pelvic bone (not the spine) using a special syringe. You will receive general anesthesia so no pain is experienced during the 1-2 hour procedure. Most donors are discharged from the hospital the next day or earlier. You may experience some pain, bruising and stiffness for up to two weeks after the procedure, however most donors are back to their regular routines within a week. Your marrow will completely replenish itself within a few weeks.

## WHAT ELSE CAN I DO TO HELP?

- Contact us to organize a donor drive in your community, office or school.
- Encourage friends and family to register at a drive or [deletebloodcancer.org](http://deletebloodcancer.org)
- Fund our efforts. It costs us \$65 to register each donor.
- You can contribute via [deletebloodcancer.org](http://deletebloodcancer.org) or fund raise via [FirstGiving.com/DKMS](http://FirstGiving.com/DKMS)
